Happy Friday, everyone.

We have attached a draft version of the Assessment overview document. It is currently ~125 pages, with some white space, and has not been reviewed by the team. We didn't have time to consolidate the IUR section, in particular; we plan to complete and share a more polished draft as a sharepoint version by Monday. We wanted to share a fairly complete draft for people to begin considering (note: the methods and hazard syntheses are unlikely to change much). Please note that we did not include Jason, Vince, etc. on this distribution, so feel free to share.

Best Regards,  
Barbara and Andrew

Hello everyone,

We wanted to provide an update on the assessment overview. Barbara and I have prepared a fairly complete draft of the document and plan to share it with this group (and, presumably, Jason and Vince as well?) tomorrow for review. We have been trying to make it (at least partially) responsive to what we've begun to hear from the Agency "descriptors" group (complicated by their differing opinions).

The draft is currently ~135 pages, so while we may trim it some more by tomorrow we will be looking to you for areas/ specific text you think are unneeded so that we can get it down to 90-100 pages before we share further.

Thank you in advance, and please let us know if you have questions/ concerns.  
- Barbara and Andrew

Thanks David. Everyone – please do not put your comments in this attachment. I will upload this document into Sharedrive and send you a link (or you can go to Sharepoint yourself and find the document in the Formaldehyde Assessment Home site.

Thanks again, Barbara and Andrew

I looked at Kris' comments, and had a few other thoughts.

Re title, I think the word “synthesis” was in our first version of “ISD”; “summary” would be better.

I think client offices might find the structure frustrating to read through a lot of approach info.. But, I realize that could be that the summary of results is at this point just a sort of placeholder, with the one table. If we flesh that out some more to include much of what they might want to quickly find, then perhaps that is not an issue.

So, a few more comments on the one Kris has sent.

David

Thanks again Barbara and Andrew!

Sorry to be a dinosaur, but I don't think all my comments are updated on the formaldehyde site (user error). I did a round a review and then tweaked some of my earlier comments, so please use the attached to see my last set of comments.

Most of my comments were on intro and method content, in general I thought the summary presentation for sensory irritation hit the right level of description.

As promised, Andrew and Barbara are sharing the beginnings of a draft assessment  
overview (or integrated summary) document for the formaldehyde toxicological review-  
inhalation. You can see the direction we are headed and we welcome your reactions.
